

## Ethical Tools for Decision Makers

PD Dr. phil. Peter Schröder-Bäck

**Third International Symposium on Ethics of Environmental Health  
Budweis, August 2016**

## Definition & Theses

- Ethics = to advise on decision-making criteria, grounded in philosophical reflection.
- Ethical knowledge needs to be “carried over” to practitioners to support decision making. (= “translational ethics”)
- Here, tools – reducing complexity and supporting application of ethical norms and values – are at least a starting point for ethical reflection. Tools can help
  - raising ethical awareness of decision makers,
  - making moral aspects explicit,
  - support ethical justification.

# The situation in (health) policy making

„Public health practitioners at all levels of practice reported that they must confront numerous ethical choices, both explicitly and implicitly, in their professional roles every day. They often feel ill-prepared to make the ‚ethical trade-offs‘ and perceive a **need for more education and support** to make these decisions.“

Gaare Bernheim R (2003) Public Health Ethics: The Voices of Practitioners. *The Journal of Law, Medicine, and Ethics* 31(4)(Special Supplement): 104-109. p. 105.

# The situation in (health) policy making

„Public health practitioners at all levels of government must confront ethical choices, implicitly, in their professional lives every day. They often feel ill-prepared to make the ‚ethical trade-offs‘ and perceive a need for more education and support to make these decisions.“

What to do?

... within a very limited time / with limited resources?

Gaare Bernheim R (2003) Public Health Ethics: The Voices of Practitioners. The Journal of Law, Medicine, and Ethics 31(4)(Special Supplement): 104-109. p. 105.

Oh, good old days!

- Turning to authority!
- Asking
  - the priest
  - the oracle
  - the boss
  - ... or in health: Hippocratican framework!

„Hippocrates had nothing to say  
about public health.“

Darragh, Martina; Milmoe McCarrick, Patricia (1998) Public Health Ethics:  
Health by the Numbers. Kennedy Institute of Ethics Journal 8: 339-358.

## Why an („extra“) Ethical Framework for PH?

„A framework of ethics analysis geared specifically for public health is needed, both to provide practical guidance for public health professionals **and to highlight the defining values of public health**, values that differ in morally relevant ways from values that define clinical practice and research.“

Kass, Nancy: An Ethics Framework for Public Health. American Journal of Public Health 91 (11), 2001: 1776-1782. S. 1776.

## Experience in Public Health

- Topic of annual discussion now at EUPHA – high demand but in case of conflict, inferior to empirical science activities.
- Public Health Faculty, Associations etc. request consultations, tools, trainings in ethics. Ethics into practice.
- “Doing ethics” in a concise manner (= Quick and dirty?).
- My answer: acquaint (future) practitioners with theories and especially Public Health Ethics tools!
  - *Philosophically founded and normative instruments, built on field-specific frameworks to facilitate decision making in practice.*

- Systematic set of criteria to structure, systematise, support, “simplify” and harmonise (ethically relevant) decision-making and support ethical debates in pluralistic societies.
- Specific for a context (e.g. ethical tool from medical ethics probably not without ado applicable for environmental health).
- Difference:
  - Who is addressed (professionals, policy makers, ...)
  - Aim
  - Structure
  - Values / principles
- Many different forms (principles, set of questions, consensus conference, ...).
- Offer “common ethical standard” and “minimal consensus”.
- Have to be developed by academics and practitioners.

Borchers, Dagmar: Ethiktools. In: Schröder-Bäck, Peter; Kuhn, Joseph (eds.) Ethik in den Gesundheitswissenschaften – Eine Einführung. Weinheim: Beltz-Juventa, 2016: 136-146. (direct quotes are own translation)

## Ethical tools – Selected challenges

- Finding a balance between:
  - Complexity  $\leftrightarrow$  simplicity,
  - Theory foundation  $\leftrightarrow$  “ready to use”,
  - Theory foundation / paradigms  $\leftrightarrow$  pluralism,
  - Expert  $\leftrightarrow$  lay approach,
  - Being helpful  $\leftrightarrow$  not instrumentlised (no window dressing!!!).
- Not to be confused with an algorithm or “world formula”.

(Cf. Borchers 2016, Beekman/Brom 2007)

Theory	no	from 5th edition on, maybe
Framework	yes	yes
Tool	yes (3 principles)	yes (4 principles)

Table 1. Five pragmatic values/value sets to supplement the principles of the International Commission on Radiological Protection

Number	Value set	Source	Comments
1	Dignity and autonomy	5, 7, 8, 15	Of the individual
2	Non-maleficence; beneficence	5, 17	Do no harm and do good
3	Justice	5, 7, 8	In the sense of fairness
4	Prudence/precaution	16, 18, 19, 20	Appears in precautionary principle
5	Honesty	8, this article	Particularly in openness and transparency

### Teaching seven principles for public health ethics: towards a curriculum for a short course on ethics in public health programmes

Peter Schröder-Bäck<sup>1,2\*</sup>, Peter Duncan<sup>3</sup>, William Sherlaw<sup>4</sup>, Caroline Brall<sup>1</sup> and Katarzyna Czabanowska<sup>1,5</sup>

1. Conceptual clarifications from a philosophical point of view (public, health, public health).
2. Basic ethical theories.
3. A set of 7 principle ("aide memoire" / "Checklist")
4. A scheme for making judgments.
5. Discussion of case studies – decision making training.

## Prima facie Principles

- **Respect for Autonomy** – Respect the will & value of every single person
  - **Beneficence** – Do good to every single person
  - **Non-Maleficence** – Avoid harm of every single person (as much as possible)
  - **Justice** – Equity, treat people equally, grant universal access to necessary goods and healthy environments etc.
- 
- **Health Maximisation** – Do good to public by improving the public's health
  - **Efficiency** – Don't waste public resources
  - **Proportionality** – Use the least infringing of necessary interventions

## Aide Memoire / Checklist (1)

- **Health Maximisation**
  - On balance: more health than harm?
  - Is the proposed intervention effective and evidence based? Can it improve population health?
  - Does it have a sustainable, long-term effect on the public's health?
  - ...
- **Efficiency**
  - Is the proposed intervention cost-effective?
  - Awareness of scarcity of public money; saved money can be used for other goods
  - ....
- **Proportionality**
  - Is the intervention the least infringing of possible alternatives?
  - Are cost and utility proportional?
  - ...

## Aide Memoire / Checklist (2)

- **Justice**
  - Does the intervention not enlarge social and health inequalities (inequities), but rather works against inequalities (inequities)?
  - Is no one (incl. 3<sup>rd</sup> parties) stigmatised, discriminated or excluded as a consequence of the proposed intervention?
  - Is the institution proposing the intervention publicly justified and acting transparently?
  - Is the proposed intervention not putting sub-populations at risks of being excluded from social benefits and / or universal access to health care?
  - Does the intervention consider and support vulnerable sub-populations (e.g. migrants)?
  - Does the intervention rather promote than endanger fair (and *real*) equality of opportunity and participation in social action?
  - Does the intervention refrain from eroding senses of social cohesion and solidarity?
  - ...

## Aide Memoire / Checklist (3)

- **Respect for Autonomy**
  - Is the intervention refraining from coercion and manipulation but rather supports free choice?
  - Is “informed consent” to take part in the intervention implemented?
  - Is self-responsibility not only demanded but possible for every person?
  - Are privacy and personal data respected?
  - If the intervention is paternalistic, is this justifiable? (“burden of proof”)
  - Does the intervention raise the ability to exercise autonomy? ...
- **Beneficence**
  - Is the intervention of any good to every single person taking part / affected?  
...
- **Non-Maleficence / Avoid Harm**
  - Will no avoidable harm be done by the proposed intervention to any individual person?
  - Are especially children prevented from harm?
  - ...

# How to apply the “aide memoire”?

---

## Steps

---

1. *Identify and frame in own words*: What is the underlying moral conflict?

2. *Identify and frame in ethical words*: Which ethical principles are relevant, how can they be specified and might they be in conflict to each other?

3. *Zoom further in*: Do I have all relevant information? Can I get more background information to understand all particularities?

4. Are *alternative solutions* feasible with less moral issues/costs?

5. *Further Specification*: Do the specifications change with more information?

6. *Weighing*: Are all conflicting principles and their specifications still of equal value?

7. What do I *conclude* from the specification and weighing? What would be my *solution* to the problem?

8. *Integrity*: Can I personally accept the conclusion drawn?

9. *Act and convince*: I act according to my judgment and convince colleagues and others also based on ethical reasoning.

---

## Ethical Tools

	<i>What's meant?</i>	<i>Chances</i>	<i>Challenges</i>	<i>Examples</i>
Normative Tools	<p>Normative Criteria</p> <p>Reduced theoretical complexity</p>	<p>Easy to use, low threshold to use</p> <p>Sensitise for moral conflicts and</p> <p>Support ethical justification</p> <p><i>Translate</i> ethical concepts for practice use</p>	<p>Easy to "misuse" (as fig leave, ...)</p> <p>Does not replace ethical reasoning</p> <p>No algorithm</p> <p>Additional methods to resolve conflicts needed</p> <p>Predefined / selected / biased norms &amp; values</p>	<p>"aide memoire", checklist (e.g. Schröder-Bäck 2014)</p> <p>principles &amp; values (cf. Malone/Zölzer 2016, Deborah's presentation yesterday)</p>
Procedural Tools	<p>Scheme or approach to apply "normative tools" or frameworks</p>	<p>Guiding reflection process (sensitisation, making judgements, ...)</p>	<p>Corset thinking</p>	<p>"how to"-apply</p> <p>GGD NL</p>
Institutions	<p>Public Deliberation processes</p>	<p>Participation</p> <p>Support democracies</p>	<p>Organisation / resources</p> <p>Manipulation / instrumentalisation</p>	<p>Consensus conferences</p> <p>Citizen science approaches</p>

# Tools are important – bridges need to be built.

My personal experience as  
“translator” and intermediary.

# Tools are important – bridges need to be built.

My personal experience as  
“translator” and intermediary.

E.g.:  
Is state  
intervention  
justifiable at  
all?

Theories, criteria.

E.g.:  
Ethics =  
hinderance.  
Or:  
I know what  
is right!

Practical problems,  
decisions.

# “Translational Ethics”

Theories, criteria.

Practical problems,  
decisions.

## “Translational Ethics”

“The European Society for Translational Medicine (EUSTM) [...] defines TM as an *interdisciplinary branch of the biomedical field supported by three main pillars: benchside, bedside and community*. The goal of TM is to *combine disciplines, resources, expertise, and techniques within these pillars to promote enhancements in prevention, diagnosis, and therapies*. Accordingly, TM is a highly interdisciplinary field, the primary goal of which is to coalesce assets of various natures within the individual pillars in order to improve the global healthcare system significantly.”

Theories, criteria.

Cohrs et al. 2015

<http://dx.doi.org/10.1016/j.nhtm.2014.12.002>

Practical problems,  
decisions.

# “Translational Ethics”

“translate (v.) early 14c., “to remove from one place to another,” also “to turn from one language to another,” from Old French translater and directly from Latin translatus “**carried over**,” serving as past participle of transferre “to bring over, carry over” (see transfer), from trans- (see trans-) + latus “borne, carried” (see oblate (n)).” <http://www.etymonline.com>

Theories, criteria.

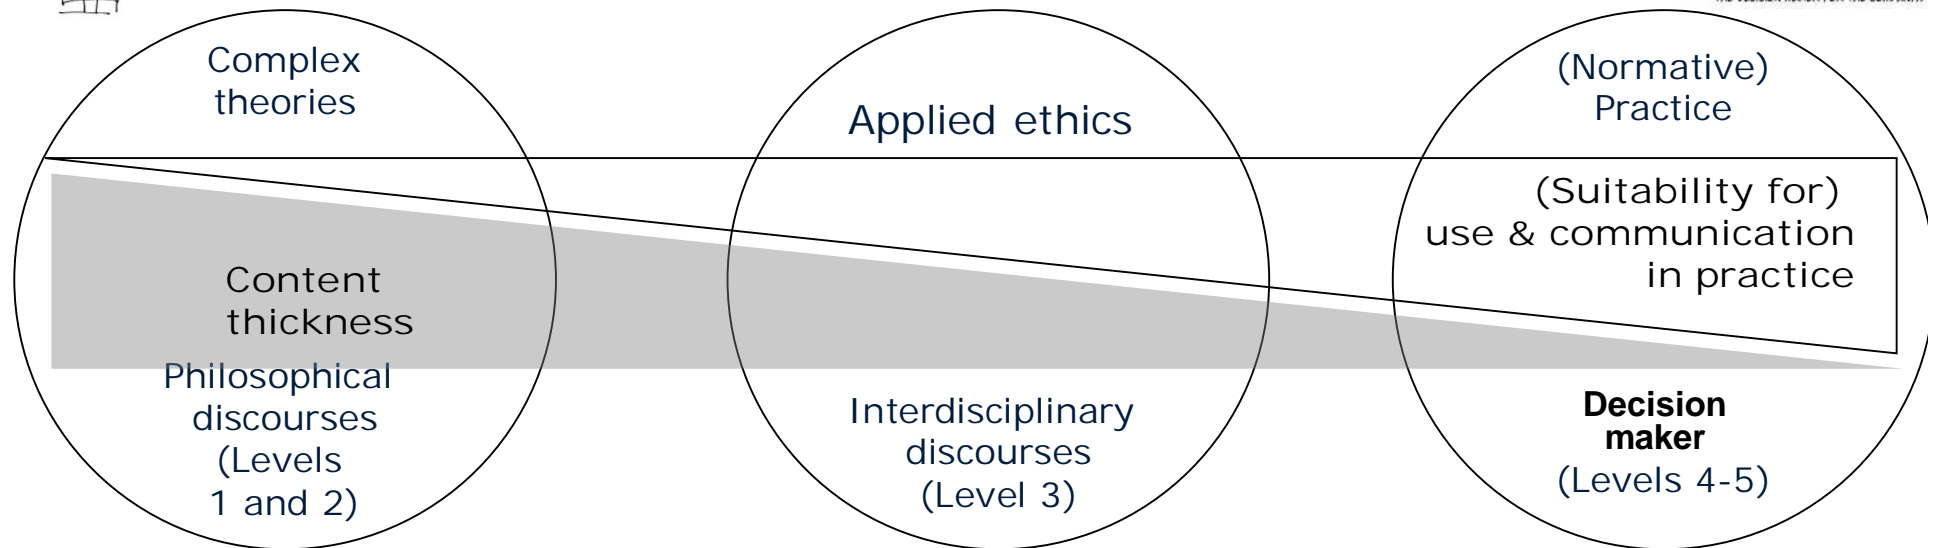

Practical problems, decisions.

## Challenges of ethics in practice

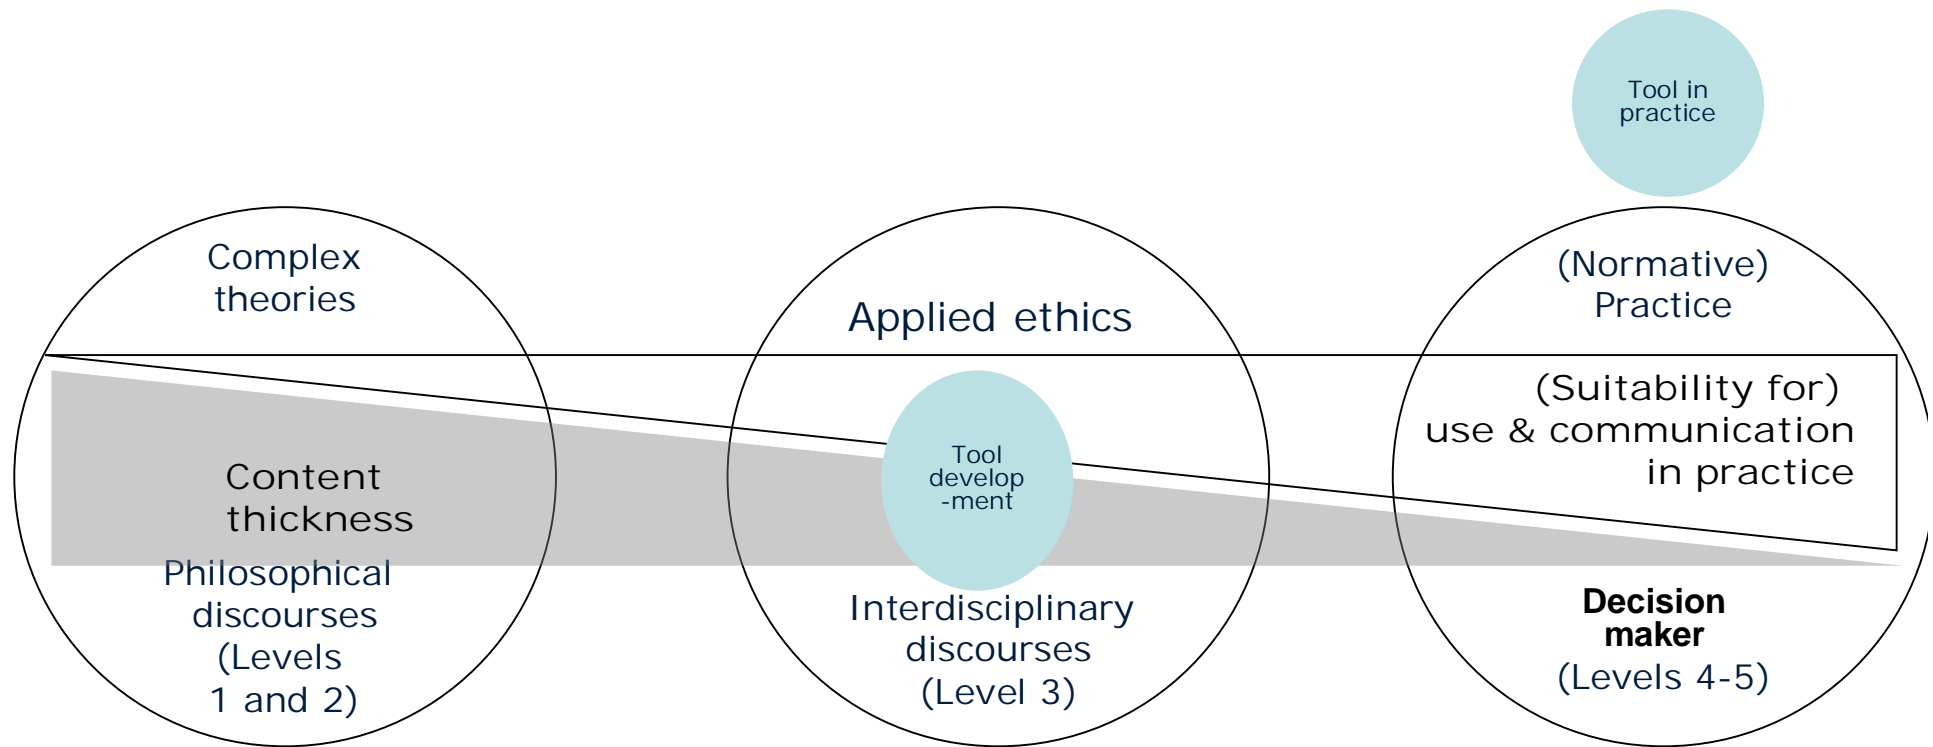

- Practitioners use ethical concepts and refer to authorities (instead of concepts and arguments).
- Understanding what the ethical concepts really mean in practice, what implications might be is unclear or often not well “translated”.
- Philosophers discuss “practical problems” often without understanding the real problem (or without connectivity).
- *Disentangling this “ethics translation process” is helpful for discussing this challenge – the following heuristic model does not want to do more than drawing attention to this.*

# Tools within “Translational Ethics”

Schröder-Bäck et al. (in prep.)

# Tools within “Translational Ethics”

Schröder-Bäck et al. (in prep.)

## 5 levels of translation / carrying over

	"location"	Autonomy
1	Yvory tower	Immanuel Kant "Kritik der praktischen Vernunft" John Stuart Mill "On Liberty"
2	<i>Philosophical Faculties / research about level 1</i>	<i>Onora O'Neill "Autonomy and Trust in Bioethics"</i>
3	Applied ethics: Interdisciplinary academic discourse, aiming at application	Beauchamp / Childress "Respect for Autonomy" ("mixing" Mill with Kant)  → 4 principles (= tool!)
4	<i>Health sciences research</i>	<i>Andermann A, Blancquaert I, Beauchamp S, Costea I (2011) Guiding policy decisions for genetic screening: developing a systematic and transparent approach. Public Health Genomics 14(1):9–16 (referencing: B/C)</i>
5	German Ministry of Health	Guideline of Commission for Genetic Diagnosis (2013), "autonomy needs to be respected", (referencing: Andermann et al. 2011 [own translation])

- Different uses of the term “tool”, also in different fields & communities.
- Ethical tools are helpful: To detect moral issues and work towards ethical justification in pluralistic contexts.
- Simplicity is a virtue – and “gateway drug”! However, tools cannot be more than a starting point – embedment into more theoretical discourses needs to accompany the more practical discourses.
- Developments of “tools” need interdisciplinary approaches. Also, practitioners need to tell philosophers what they need.
- The “translation process” maybe can be pronounced and further explored.
- We need (more) debate and research about what do practitioners & decision makers want / need and how philosophers can be helpful in making PRACTICE better...
